

Levario Coatings
INTERNATIONAL CORP.
PERFORMANCE COATINGS FOR A HEALTHY PLANET

Our Green Commitment

Levario Coatings International, throughout the development of its water based, non-VOC formulations is dedicated to creating a variety of multi-functional coating solutions that are gentle on this planet's eco-system and safe for applicators when using them. Levario's continued commitment is to improve the quality of life through its innovative solutions.

Levario Waterproofing Products is an environmentally safe and friendly, water and corrosion proofing product designed for a wide range of protective coating applications: such as waterproofing building foundations. The Levario Waterproofing Products product is an eco-friendly product and does not harm the environment.

All of the Levario products are designed to be cold applied to maximize worker safety and to provide labor and energy savings.

- Seamless & Flexible Waterproof Membrane
- Superb Adhesion to Most Substrates
- UV protection and Solar Reflectivity
- No Solvents, VOCs and Non-Toxic

At Levario, we deliver environmentally friendly, effective, high performance coatings to an extensive range of markets and applications. Therefore, we critically evaluate all of our coatings formulations to ensure that we avoid the use of hazardous raw materials AND maximize the performance of all our products.

Our knowledge and understanding of the potential environmental impact of our various raw materials is constantly evolving, as is legislation. So the process of reviewing and eliminating the use of hazardous materials is a continuous one.

Since hazardous chemicals are not used in our products, we remove the risk of chemicals finding their way into the environment as a result of our formulations. This also contributes to a safer working and living environment for our applicators and building occupants.

Green & Clean

All of our products are non toxic and completely free of VOCs. Our water borne chemistry is simple to clean up and has virtually no odor.

Perfect for virtually any surface, Levario coatings create a seamless, highly flexible waterproof membrane that is easily sprayed, brushed, rolled, or troweled onto surfaces. Depending on thickness, temperature and humidity, drying time usually takes 24-48 hours. Each coating is applied cold, so protective equipment is not required during application. Levario products contain no noxious odors or VOCs – making all coatings environmentally safe. You can even use them in fish ponds.

Levario products do not get brittle over time, do not deteriorate with prolonged exposure to water, and are impervious to many chemicals. Our coatings have tremendous elasticity and recovery; they can handle the expansion and contraction of buildings. Levario coatings will not sustain flame and are UV resistant. These features make Levario products perfect for waterproofing and corrosion protection applications.

Volatile Organic Compounds

VOCs are carbon compounds that evaporate at room temperature and react in sunlight to form ground-level ozone, an integral component of photochemical smog. VOCs can cause respiratory, skin, and eye irritation; headaches; nausea; muscle weakness; and more serious ailments and diseases, according to the EPA. Formaldehyde, a VOC commonly found in paint, is a probable carcinogen. The EPA has found that indoor concentrations of VOCs are regularly up to ten times as high as outdoor concentrations, and can climb up to a thousand times as high as outdoor concentrations when you are applying paint.

A major source of man-made VOCs are coatings, especially paints and protective coatings. Solvents are required to spread a protective or decorative film. Approximately 12 billion litres of paints are produced annually. Typical solvents are aliphatic hydrocarbons, ethyl acetate, glycol ethers, and acetone. Motivated by cost, environmental concerns, and regulations, the paint and coating industry are increasingly shifting toward aqueous solvents

Levario Brand of Products

LEVARIO is one of the world's preeminent suppliers of waterproofing, corrosion protection and fire resistant products for metal and concrete. All products at LEVARIO are environmentally safe, non-hazardous, can be applied indoors and outdoors with no special protective equipment and easy for contractors to use.

We are built on the belief that industry experts deserve products and services that meet their specific needs in the most cost effective manner.
